Project 4	*Group 14*	*Defect Tracking*			
Defect			Fix		
Date Reported	Who reported	Description of defect	Date Fixed	Who fixed it	Description of how it was fixed
4/12	Alice	Multiple instances of program launched, leaving ghost processes running after the program closed	4/17	Alice	Discussing the logic with a senior programmer, using this.close() to close forms upon logout
4/15	Alice	Faculty Form disfunctional when duplicating from student form	4/17	Alice	Renaming Designer.cs with the properties and using match-case+match-whole word settings to update the form.
4/18	Justin	SQL queries to enable the StudentView dgv to show a student's courses are not working as expected	4/18	Justin	Conver the query results into an array of ints and use each element in this array to DisplayData into the courses data grid view
4/19	Justin	Enrollment queries not properly showing up into the data grid view for enrollment when a semester is selected.	4/19	Justin	Properly updated and seeded main DB
4/19	Justin	When a student is enrolled in two or more classes, only one shows up in the class view	4/19	Justin	Modify sql select statement to be able to show each row when DisplayData is called
4/21	Justin	Student view classes will only show up to 3 classes	4/21	Justin	Bug fix for finding the current row and corresponding id cell in the data grid view
4/22	Minwoo	Student can enroll in the same class twice			
4/22	Maggie	Using Visual Studio's built in Test Suite doesn't allow easy referencing to other classes	4/22	Alice	Visual Studio's built in Test Suite is not compatible. Will build own Test Suite in a separate class.
4/23	Maggie	No button click to remove a course for a professor (an issue when running Test Suite).	4/23	Maggie	No fix needed in UI (wouldn't make sense for a professor to remove themselves). Built in a helper function for the test to remove the course after enrollment is successful.
4/23	Maggie	Enrollment and Teaching tables must be accessed different for validating error messages in the Test Suite.			
CODE REVIEW					
4/22	Thresa	In StudentUI, clicking the left listbox opens the appropriate tab and the clicked listbox text is highlighted. Changing the tab manually (using the tabs at the top) does not change which listbox text is highlighted. ***			
4/22	Thresa	In Student UI, the bottom of the tab box does not align with the calender	4/22	Justin	Extended the tab box using the designer to align with the bottom of the calender
4/22	Thresa	In Student UI, changing the window size/tab window size does not expand the displayed tables. It would be nice if the tables would anchor to the size of the tab box.			
4/22	Thresa	In Student UI, set the account information text boxes to read only. Dont allow user to type/edit them. ***	4/22	Justin	Each text box contains a property 'readOnly' that can be set to either true or false. By changing the property of these text boxes to true, the user can no longer edit them.
4/22	Thresa	In Student UI, editing the email and submitting it results in a strange font size	4/22	Justin	Had to resize the overall form so that each textbox could be expanded and made larger. This resulted in some reordering of other elements. However, once every textbox was made larger, the email-textbox was large enough to show an email-length sized string at the same font as each other textbox.
4/22	Thresa	In Student UI, in the enrollment table, clicking on a box should select the whole row, not just the single box.	4/22	Justin	For the enrollmnet datagridview, I edited the DataGridViewSelectionMode to be FullRowSelect, rather than a single cell.
4/22	Thresa	In Student UI, there is an empty row in the enrollment table. If possible, get rid of this extra row.	4/22	Justin	I believe that extra row was there because the property 'AllowUserToAddRows' on the enrollment datagrid view was set to true. This extra row provided the user with the option of directly adding an entry to the database. By setting 'AllowUserToAddRows' to false, the extra row is now gone.
4/22	Thresa	It would be nice to view the grades in the Student UI
